GENERAL - New South Wales

Several indicators pointed to a reduced level of economic activity during the latter part of 1965 or at least to a lesser rate of expansion than that prevailing in recent years.

The recent drought (which was only partially relieved by rain towards the end of the year) has contributed to this slowing down by reducing farm incomes and adversely affecting export earnings while imports continue at a high level. Consequently Australia's international reserves have fallen during the year but remain at a relatively high level.

The Central Bank has reduced statutory reserve requirements in order to keep the credit supply through the banks at a desired level (which is subject to the special needs of farmers affected by the drought). Despite this the liquid assets ratio of the trading banks was relatively low at the end of the year. Trading bank deposits increased slowly in 1965 and their advances rose as a proportion of deposits.

Total employment increased steadily throughout the year (especially for the service industries and for women) although there has been a slight downward trend in factory employment in New South Wales and the number of unplaced applicants rose by more than usual during December.

The rate of growth in the production of most factory items is slowing down and there were relative declines for many of them during the latter half of the year. This is associated with a continuing rise in stocks and a relatively slow expansion of retail sales.

Accumulation of savings deposits remains relatively high, while the upward trend in instalment credit has not been maintained during recent months. When compared with last year, motor vehicle registrations dropped rapidly in the second part of 1965 and the same applies to dwelling approvals and commencements.

EMPLOYMENT (See Also graph p. 209)

Employment has continued to increase steadily in recent months, and the number of wage and salary earners in civilian employment in New South Wales (excluding employees in rural industry and private domestic service) rose by 14,500 during November, 1965 to 1,412,000, which was 3.3 per cent. more than a year earlier. All the industry groups listed below increased their employment during the month as well as over the year ended November. As in preceding years, the growth rate was faster for female than for male employment and was particularly strong in the service industries where the majority of employees are females.

Employment in the other States continues to rise a little faster than in New South Wales and the Australian total increased by 3.6 per cent. to 3.6 million between November, 1964 and 1965.

Australia	3,482,500	3,521,800	3,621,800	3,647,200	3.8	4.1	3.6

A monthly survey of privately owned factories (by the Department of Labour and National Service and the Commonwealth Statistician) showed a peak employment of 267,100 in March, 1965; by September this had declined to 263,000 and after reaching 263,500 in November, it fell to 262,900 in December and was then 400 less than a year earlier. Over the year, male employment in these factories rose by 200 and female employment fell by 1,000, and during this period only the basic metals, building materials and chemical industry groups showed any rise. During the month of December some firms reduce staff seasonally, usually by postponing replacement of staff wastage, and this is partly balanced (in particular for male staff) by the engagement of school leavers. Thus, while the fall in December, 1965 was not unusually large it fits in with the slightly downward trend of factory employment which had been evident since the first quarter of 1965.

1965	19,500	49,500	23,700	63,200	14,900	32,400	26,700	32,900	197,700	65,200	262,800

The number of unplaced applicants registered for employment with the Commonwealth Employment Service in Australia rose seasonally from 36,400 in October, 1965 to 45,700 in November and 67,600 in December when it was 13,100 (or 24 per cent.) more than in December, 1964. The December rise in persons registered was larger than usual in 1965 because of greater numbers of school leavers particularly in N.S.W. and of increased registrations of seasonal workers in Queensland. Of the increase in registrations during December (21,900), 78% were males and over 70% were juniors, including school leavers.

The number of recipients of unemployment benefit increased by 10,000 during the month to 20,500 at January 1st. More than half of this increase occurred in Queensland.

During December, job vacancies registered fell seasonally in all States except South Australia and Tasmania and at the end of the month totalled 60,400 (42,100 for males and 18,300 for females), which, with the exception of 1964 (61,500) was the highest number recorded for ten years. The surplus of persons registered over vacancies registered at the end of December was thus 7,200 in 1965 compared with an unusual surplus of vacancies in 1964.

State: N.S.W.	43,100	38,800	20,100	29,900	13,300	17,000	14,100	23,100
Victoria	27,400	19,400	11,300	16,000	6,900	11,700	8,300	15,600
Queensland	25,800	24,600	8,000	18,100	5,500	12,400	6,600	16,600
South Aust.	8,500	6,400	4,600	5,300	5,700	4,800	3,600	6,100
West Aust.	5,800	6,700	4,700	5,900	3,500	5,200	2,100	3,300
Tasmania	5,300	5,300	3,000	4,900	2,600	3,400	1,700	2,800

For New South Wales, the number of applicants registered increased seasonally from 20,200 at the end of November to 23,100 for December which was 6,100 (or 36 per cent) more than a year before, but much less than in earlier years. It was also 1,400 in excess of the number of unfilled vacancies (21,700) registered at the end of December compared with a surplus of 3,700 vacancies at the end of 1964, but the difference was smaller than in other recent years when the number of unplaced applicants had been more than twice the number of vacancies.

Juniors (including school leavers) comprised more than half the applicants at December, 1965 as in 1964 and 1963. The number of juniors rose from 9,500 in 1964 to 12,400 in 1965 but was still considerably less than in other recent years.

As is usual for this time of the year the total number of unplaced males has risen considerably faster than the corresponding figure for females. However at 14,000 for December, 1965 male applicants were 1,200 less than the number of registered vacancies for males, whereas female applicants exceeded female vacancies by 2,700.

Coal production in New South Wales during 1965 reached a record level of 24 million tons which was 16 per cent. more than in 1964 (compared with a 9 per cent. increase in the previous year) and more than double the output of the immediate post-war years.

During 1965, production in the Southern district, which now accounts for 40% of the State total, increased by 15 per cent. to 9.7 million tons. The output of this district has expanded continuously in recent years. Apart from a steadily growing demand for coal for use in steel production and electricity generation, substantial quantities of coal are shipped to Japan from this district.

The output of the Newcastle field increased by nearly 1 million tons in 1965 to 7.8 million tons (about one third of the State total). The major consumers for this area are electricity generators (mainly the Vales Point Power Station) and the iron and steel industry. The total Northern Districts output (which includes Cessnock and the North Western fields) rose by 18 per cent. during 1965, but its share of the State total has contracted from 64% in 1952 to just under one half in 1965 due mainly to the restriction of open cut mining after 1952 and the loss of traditional markets to alternative fuels (for example, the use of petroleum products by the railways and for gas making).

COAL PRODUCTION IN NEW SOUTH WALES - Million Tons

NEW BUILDING APPROVALS - New South Wales (See also graph p.210)

For the June, September and December quarters of 1965 the number of approvals of new houses and flats in the State have been less than for the corresponding quarters of 1964. This decline accelerated in the December quarter, when the 1965 figure (9,100 dwellings) was 21 per cent. less than in 1964 (11,500) and 12 per cent. below 1963 (10,300). Both houses and flats contributed to the decline, but the fall was particularly marked in the case of flats (down 38%), following a boom in flat building in 1964.

For the year ended December, total approvals were down on the previous year by 9 per cent. for both houses and flats; however the total value of dwelling approvals rose by 1 per cent. indicating an increasing average cost per unit.

The value of all types of building approved during the year 1965 was up by 4 per cent. to £319m. (following an increase of 19 per cent. for the previous year). Nearly all of this increase of £13½m. was accounted for by a rise in the value of approvals of educational building (up by £8m. to £31m.) and of factories (up by £3m. to £28m.).

## FACTORY PRODUCTION - New South Wales

Comparing the six months ended December, 1964 and 1965, production of many of the principal factory products in New South Wales fell slightly, and for others the rate of growth slowed down appreciably in 1965.

## FACTORY PRODUCTION - New South Wales - July to December, 1965 and Earlier Periods

$\pounds$  Value at factory for the year ended June, 1964

New motor vehicle registrations in New South Wales were at record levels in the early part of 1965, but the upward trend then slackened and for the December Quarter registrations were 15 per cent. below the same period of 1964. For the year ended December, 1965, registrations of 147,200 new vehicles were 0.7 per cent. less than in 1964, with a rise of 2,300 in new cars more than offset by a fall of 3,100 in station waggons.

Australian registration figures followed a similar pattern, although the relative falls were fractionally smaller at 13 per cent. for December quarter and 0.4 per cent. for the full year.

Registrations in Australia for the full year 1965 were also a fraction below the peak 1964 level, an increase of 3 per cent. for cars (which comprise about one third of the total) being balanced by a fall in station waggon sales.

NEW SOUTH WALES RAILWAYS

Comparing the five months ending November of each year, the volume of passenger traffic on the State Railways fell from a peak of 111 million in 1964 to 108 million in 1965. But the volume of goods carried (excluding livestock) has grown constantly in recent years and was 11 million tons in the five months of 1964 and 12 million tons in 1965. A small rise in gross earnings between July–November, 1964 and 1965 was more than offset by additional working expenses and the surplus on working account fell from £7.7 million to £7.2 million.

## FINANCE AND TRADE

## CENTRAL BANKING AND SHORT TERM MONEY MARKET

Between December of 1964 and 1965, Australia's international reserves fell sharply from £825m. to £639m., reflecting an adverse overseas trade balance in each month during 1965 which was not fully compensated by capital movements. However, it should be noted that the 1964 figure had been the highest ever recorded for December, and that the 1965 figure remains relatively high when compared with the years prior to 1963.

These movements in international reserves resulted in a similar trend in the Gold and Foreign Exchange holdings of the Reserve Bank which fell from £780m. in December, 1964 to £584m. in 1965; this fall was partly offset by rises of £83m. (to £519m.) in the Bank's holdings of Government Securities and of £41m. (to £86m.) in Other Assets. On the liabilities side, the principal movement for the year was in Statutory Reserve Deposits of the Trading Banks which fell by 14 per cent. to £317m.; a fall of £19m. in the note issue reduced it to £450m. which is the lowest December figure since 1961.

The Australian note issue at the end of November was £426 million in 1965 which was 4.3 per cent. below the 1964 level and the lowest since 1961. During December, the pre-Christmas seasonal increase of 19 per cent. was about the same as in recent years, but the peak issue of £508 million remained slightly below the level of 1964 or 1963.

## AUSTRALIAN NOTE ISSUE - £ million

Year	Note Issue as at		Seasonal Increase	Note Issue as at 8th Jan. of following year
	End of November	Christmas Peak		
1939	51.5	57.3	5.8 (11%)	52.8

1965	426.2	507.7	81.5 (19%)	443.7

Liabilities to clients of authorised dealers in the Short Term Money Market increased from a weekly average of £164 million for October, 1965 to £171 million for December, as against a decrease over this period of last year from £171 million to £168 million. Minimum rates of interest for money at call dropped towards the end of 1965 (to 1.0 per cent. for December) and at the same time there was an increase in the maximum rates payable for fixed periods.

MAJOR TRADING BANKS - Australia

Trading bank deposits continued to rise in December, 1965 (as is usual for this time of the year) reaching £2,489 million which is £100 million (or 4.2 per cent.) more than in December, 1964, compared with an increase of 13 per cent. during the previous twelve months. The increase between December, 1964 and 1965 was more than accounted for by the continuing upward trend in fixed deposits. (which rose by 15 per cent. to £970 million); however this was partly offset by a fall of 2½ per cent. over the year in current non-interest bearing deposits. Total trading bank advances fell slightly during December but by less than is usual for this time of the year and at an average of £1,330 for the month they were 11½ per cent. more than a year before. The advances to deposits ratio fell from 57.5 per cent. for July to 53.4 per cent. for December, but was still more than for December, 1964 or 1963.

Statutory Reserve Deposits requirements for December, at 12.7 per cent. of customers' deposits in 1965 were less than in 1964 (15.4 per cent.) but more than in the two preceeding years, while the trading banks' liquid asset ratio for December at about 25 per cent. in 1965 was less than for 1964 or 1963.

Overdraft limits for bank advances (excluding those to wool buyers and term loans) increased by £2 million during December, 1965 to £1996 million (or 2.8 per cent. more than at the end of last year). As in previous years, advances drawn against them fell during December, so that the balance of "unused limits" increased to £823 million; however, the ratio of "unused" to total limits in December, at 41 per cent., was less than for the same month of recent years.

SAVINGS BANK DEPOSITS (See also graph p.210)

Savings bank deposits in New South Wales (including interest credited to accounts) fell by £2m. during December, 1965 to £881m. at the end of the month. At this level they were 6 per cent. higher than a year earlier, as compared with increases of 11 to 12 per cent. over the three previous years. For Australia, the annual rates of growth in savings deposits have been slightly larger - 7 per cent. over 1965 as against 12 or 14 per cent. for the three preceding years.

SYDNEY STOCK EXCHANGE

The Sydney Stock Exchange Index for all ordinary shares indicated a strong downward trend from the beginning of 1965 until September (except for a rise in August). The index steadied in November and December when fluctuations were comparatively small and returned to a slightly higher level in January.

Comparing the six months ended December of 1964 and 1965, the total revenue of the Commonwealth Government increased by 12.7 per cent. to £872 million and total expenditure increased by 16.9 per cent. to £1,144 million. There were increases in income from all major sources except company income tax, estate and gift duties and territories; and increases in all the main expenditure items except unemployment and sickness benefits. The large increase in grants to the States reflects a revised system whereby payments are now made relatively earlier in the financial year. Loan Fund Expenditure for the six months rose from £149m. in 1964 to £190m. in 1965.

Total Commonwealth Revenue for the six months ended December increased by £98 million between 1964 and 1965. Of this extra revenue, personal income tax provided £52 million and other taxes and business receipts increased by £57 million which was partly offset by a fall of £12 million in company taxation. Over the full year ended June, 1966, total revenue is budgeted to rise by £285 million, of which personal taxation is expected to account for £115 million.

NEW SOUTH WALES GOVERNMENT ACCOUNTS

Comparing the six months ended December of 1964 and 1965, total Government revenue increased by 12 per cent. and total expenditure by 9 per cent. resulting in a surplus for the period of £3.9 million in 1965 compared with a deficit of £1.7 million in 1964.

Receipts of the Consolidated Revenue Fund rose by 17 per cent. to £121 million for the six months, mainly because of a change in the method of payment of the Commonwealth Tax Reimbursement Grant whereby payments are now spread evenly throughout the year. There were relatively small falls in receipts from stamp and probate duties and from "miscellaneous" sources. On the other hand, expenditure from this account increased by 11 per cent. to £126 million, there being increases in all main items of

expenditure but especially in health, education and other social services.

The revenue of the business undertakings rose by 4 per cent. and their working expenses by 4½ per cent., so their working surplus remained virtually unchanged at about £8.8 million. Gross loan expenditure on works and services for the six months ended December has grown from £31m. in 1963 to £38m. in 1964 and £43m. last year.

RETAIL TRADE (See also graph p.210)

Compared with the corresponding periods of the previous year, the rate of increase in the value of retail sales in Australia (excluding motor vehicles, parts and petrol) fell from 5.3 per cent. for the September quarter, 1965 to 1.6 per cent. for October and then partly recovered to 4.8 per cent. for November. For New South Wales, the annual rate of increase declined from a peak of 7.9 per cent. for the December quarter, 1964 to 5.8 per cent. for the March and June quarters, 1965 and then further to 4.6 per cent. for the September quarter.

The annual rate of increase in the value of retail sales of motor vehicles, parts, petrol, etc. fell from 9.0 per cent. for the March quarter to 5.7 per cent. for the June quarter to 2.2 per cent. for the September quarter. The corresponding figures for N.S.W. were even less.

Statistics issued by the Retail Traders Association of N.S.W. also indicate an improvement in their retail sales for November (when compared with the same month of 1964), especially for suburban stores. Comparing November, 1964 and 1965, the largest relative increases were in the hardware, furniture and electrical goods group for the city, and in the food group for the suburbs. Sales of clothing, footwear and piece goods were about the same as last November.

ø Quarter

(Figures for Amount Financed exclude, but Balances Outstanding include, interest, hiring charges, insurance etc.)

In recent months, the upward growth in the amount of instalment credit financed by non-retail finance businesses in New South Wales has not been sustained, and the October and November, 1965 figures (at £10.2m. and £10.9m. respectively) were below the corresponding months of both 1964 and 1963. A similar trend is evident in the Australian figures.

Balances Outstanding to these finance businesses, however, continue to rise and between November of 1964 and 1965 they increased by 5.6 per cent. to £206m. in New South Wales, and by 7.8 per cent. to £546m. in Australia.

DEBITS TO CUSTOMERS' ACCOUNTS - New South Wales

(Excluding Government Accounts at metrop. branches and Central Banking Business)

Money turnovers, as measured by bank debits reflect an easing in business and trade turnovers. Debits in New South Wales which had increased at the rate of 15 per cent. between 1963 and 1964 and 13 per cent. between January-June, 1964 and 1965 rose by only 2½ per cent. in the September quarter and in December quarter, 1965 they were slightly less than in that period of 1964.

REAL ESTATE SALES, MORTGAGES AND LIENS - New South Wales

The recorded value of real estate conveyances and transfers in New South Wales rose by £31m. or 6 per cent. to a record of £559m. in 1965, as compared with a rate of increase of nearly 20 per cent. per annum in 1964 and in 1963. The number of registered transactions rose by only 3,100 or 2½ per cent. to 125,400 in 1965 and was then only a little higher than in the peak year of 1961.

The value of all registered mortgages rose by 8½ per cent. to £298 million in 1965 compared with a 16 per cent. increase in the previous year. Most of the increased value of first mortgages came from corporations other than banks although there were small increases in loans by building societies and banks.

The weighted average rate of interest on private first mortgages (other than those granted by government agencies, banks or building societies) eased from about 8.8% at the end of 1964 to 8.4% early in 1965 but was back to 8.8% by the end of the year. In the early post-war period until 1952 this rate had been around 4½%; it doubled in the next ten years to a peak of 9.1% in the second half of 1962 and has been between 8½ and 9 per cent. in recent years.

OVERSEAS TRADE - AUSTRALIA

Australia's merchandise imports continued at a relatively high level in December, 1965 when they were worth £122.7 million or £1.4 million more than the previous December. Merchandise exports for December were worth £110.1 million or £3.3 million less than December, 1964 and the deficit for the month increased from £7.9 million in 1964 to £12.6 million in 1965.

Comparing the six months ended December, 1964 and 1965, imports were up by 7.8 per cent. to £763 million, whereas exports were up by 2.8 per cent. to £667 million, thus increasing the trade deficit for the period from £59 million to £96 million.

PART III : RURAL INDUSTRIES

THE SEASON - New South Wales (See also graph p.209)

During December, widespread rain eased drought conditions in most areas of the State except for the north-west. Also the outlook for the Southern Tablelands is not bright, despite good falls early in the month. The South Coast dairying district was the only area shown in the table below to receive less than normal rainfall during December which has been the relatively wettest month for more than a year.

For the full year 1965, the actual rainfall as a ratio of the annual norm was as low as 41% for the wheat districts; 67% for the sheep districts (the lowest since 1957); and 78% for coastal dairying (the lowest since 1960).

The outlook for the north and north-west (except the far north-west) has now improved. Most of the wheat crop has been harvested in the western region and lucerne and cereal hay-making is under way. As at December 28th, the Grain Elevators Board had received 20.2 million bushels of the current season's wheat harvest, compared with 85.2 million bushels at this time last year. The 1965-66 wheat crop has been finally estimated at 39 million bushels (of which three-quarters was grown in the southern division) compared with last year's record of about 150 million bushels.

WOOL (See also graph p.209)

For the six months ended December, first-hand wool deliveries into New South Wales stores (at Sydney, Newcastle and Goulburn but excluding Albury which handles mainly Victorian wool) dropped from 1.10 million bales in 1963 to 1.05 million in 1964 and again (by 18 per cent.) to 0.87 million bales this season. The quantity sold during the six months also fell by 18 per cent. to 672,000 bales in 1965 and, because of lower prices this season, the proceeds from these sales fell from £64 million to £48 million.

The average price per pound of greasy wool sold at N.S.W. auctions (based on the average composition of a full year's clip as shown in the table below) rose from a trough of 54 pence for May and June, 1965 to 61 pence for November and remained firm at this level for December. Medium fine grades made small price gains but rates for all other descriptions remained steady during most of the month. The main buying strength at the December sales was provided by Japan, Western Europe and the United Kingdom with some enquiry from the United States and Eastern Europe.

WOOL PRICE, NSW, Pence per lb. greasy - Monthly Index based on Composition of Year's Clip

P = preliminary

For Australia for the same six month period, first hand receipts by brokers (at 3,214,000 bales in 1965) were down by 9 per cent. on 1964 and total receipts (i.e., including the carry-over from the previous season) were the lowest since 1960 at 3,527,000 bales. Sales fell by 8 per cent. to 2,229,000 bales (the average net weight per bale increasing from 303.5 lbs. to 304.5 lbs.) and, because of lower prices, total proceeds from these sales fell by 12½ per cent. to £165.3 million.

The main wool selling season starts in August and the figures below refer to shipments during the three months ended November each year, which would mainly comprise wool from the new season. The quantity shipped in these three months (greasy equivalent) was 392 million pounds for 1965 or 4 per cent. more than for 1964 (although less than in the three preceding years). This increase was more than accounted for by additional exports to Japan; there were also rises for the United States and the Common Market countries but these were partly offset by a large drop in exports to Britain. Although the volume of wool exports increased between 1964 and 1965, their value fell by 8 per cent. to £94.4 million, the average price per pound falling from 65 pence to 58 pence.

DAIRYING - New South Wales

Dairy production in New South Wales for the six months ended December, 1965, at 164.2m. gallons was 4m. gallons (or 2.4 percent.) lower than for the corresponding period in 1964. The main reductions were in the amount used for butter production (down by 2.9m. gallons or 3.3 per cent.) and the amount used for cheese production (down by 0.7m. gallons or 12.3 per cent.) These reductions were partly offset by a rise of 0.8m. gallons (or 1.7 per cent.) in the quantity supplied to the Milk Board.
